

The effectiveness of tertiary care psychotherapy: A benchmarking study

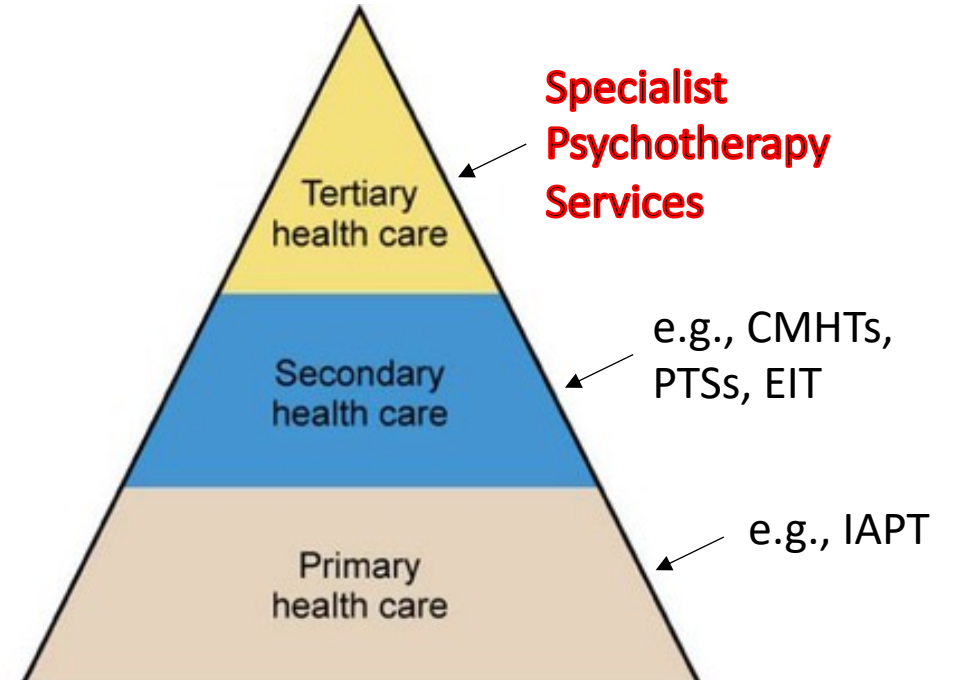

Chris Gaskell

The
University
Of
Sheffield.

Tertiary Care Services

- Specialist provision.
- Patients who have not previously responded.
- Low provision, high demand.
- Very little available evidence of effectiveness.

The Current Study

(hereafter will be referred to as 'Evaluation')

- Data from a single UK tertiary care service.
- Outcome measure project (2010-present).
- Various forms of psychotherapy offered.
 - Psychoanalytic Psychotherapy
 - Cognitive-behavioural Psychotherapy
 - Cognitive-analytic Psychotherapy
- Self-report measure of effectiveness
 - Not systematic.

OQ-45

- Outcome-Questionnaire (OQ-45; Lambert 2004).
- Strong psychometric properties (Lambert et al., 1996; Vermeersch et al., 2000).
- Highly used in the US and mainland Europe, but not in the UK.
- Overall measure of psychological distress

Outcome Questionnaire (OQ[®]-45.2) Name: _____ Date: ____/____/____

Never Rarely Sometimes Frequently Almost Always

Instructions:
Looking back over the last week, including today, help us understand how you have been feeling. Read each item carefully and fill the circle completely under the category which best describes your current situation. For this questionnaire, work is defined as employment, school, housework, volunteer work, and so forth.

1. I get along well with others.....
2. I tire quickly.....
3. I feel no interest in things.....
4. I feel stressed at work/school.....
5. I blame myself for things.....
6. I feel irritated.....
7. I feel unhappy in my marriage/significant relationship.....
8. I have thoughts of ending my life.....
9. I feel weak.....
10. I feel fearful.....
11. After heavy drinking, I need a drink the next morning to get going. (If you do not drink, mark "never").....
12. I find my work/school satisfying.....
13. I am a happy person.....
14. I work/study too much.....
15. I feel worthless.....
16. I am concerned about family troubles.....
17. I have an unfulfilling sex life.....
18. I feel lonely.....
19. I have frequent arguments.....
20. I feel loved and wanted.....
21. I enjoy my spare time.....
22. I have difficulty concentrating.....
23. I feel hopeless about the future.....
24. I like myself.....
25. Disturbing thoughts come into my mind that I cannot get rid of. (If not applicable, mark "never").....
26. I feel annoyed by people who criticize my drinking (or drug use).....
27. I have an upset stomach.....
28. I am not working/studying as well as I used to.....
29. My heart pounds too much.....
30. I have trouble getting along with friends and close acquaintances.....
31. I am satisfied with my life.....
32. I have trouble at work/school because of drinking or drug use. (If not applicable, mark "never").....
33. I feel that something bad is going to happen.....
34. I have sore muscles.....
35. I feel afraid of open spaces, of driving, or being on buses, subways, and so forth.....
36. I feel nervous.....
37. I feel my love relationships are full and complete.....
38. I feel that I am not doing well at work/school.....
39. I have too many disagreements at work/school.....
40. I feel something is wrong with my mind.....
41. I have trouble falling asleep or staying asleep.....
42. I feel blue.....
43. I am satisfied with my relationships with others.....
44. I feel angry enough at work/school to do something I might regret.....
45. I have headaches.....

Hypotheses

1. That patients will present with high levels of distress.

Compare baseline distress levels to other OQ-45 studies.

2. That treatment will be effective and comparable to other services.

Benchmarking Cohen's d (pre-post mean change) to other services.

Benchmarking recovery rates to other services.

3. There will be no sig difference between modalities (for effectiveness)?

As above between treatment groups.

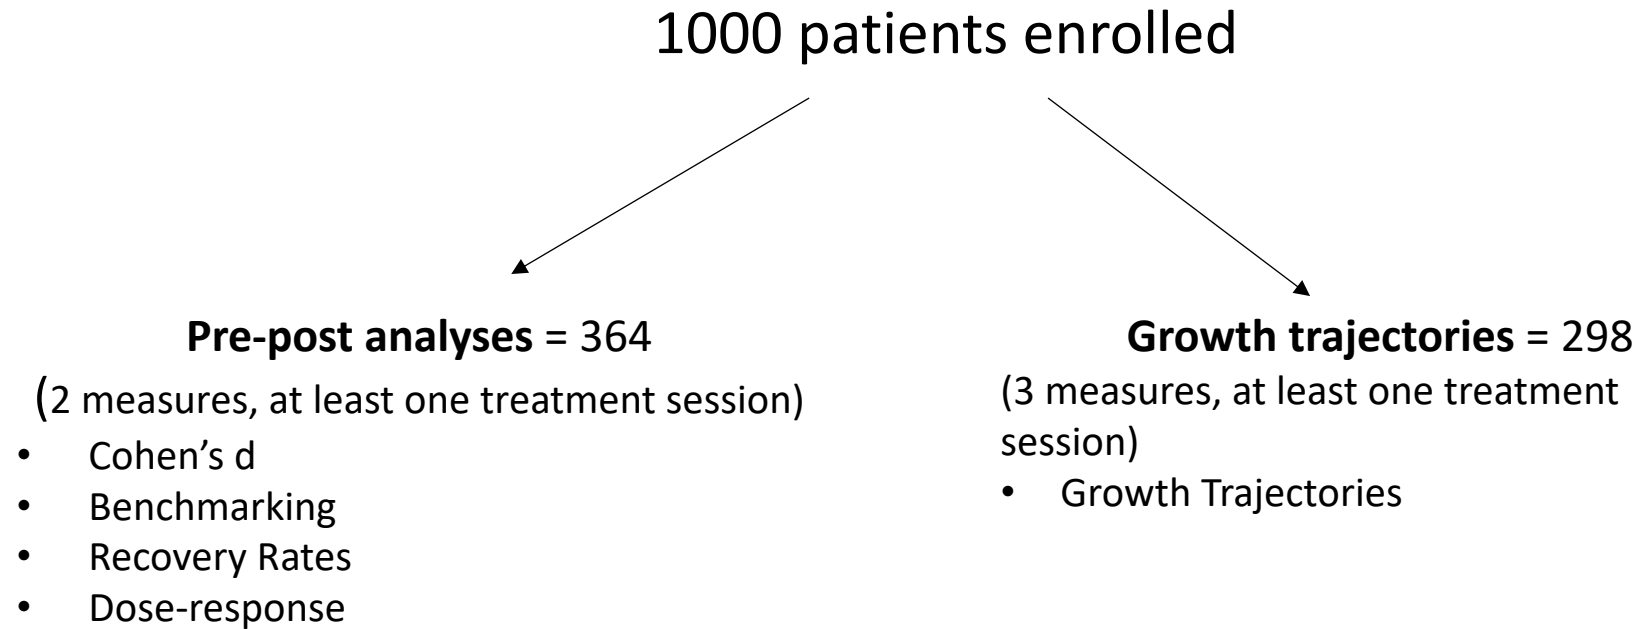

4. Change across sessions will be non-linear.

Longitudinal multi-level modelling.

5. That very long treatments would not demonstrate greater effectiveness?

Compare groups based on number of sessions.

Evaluation

		CBT	CAT	PAT	Total	p-value

PAT sub-sample (SPS)	86	0.51

Social Role subscale

SPS service (current study)	364	0.36
CBT sub-sample (SPS)	248	0.35
CAT sub-sample (SPS)	30	0.65
PAT sub-sample (SPS)	86	0.29

Interpersonal subscale

SPS service (current study)	364	0.29
CBT sub-sample (SPS)	248	0.3
CAT sub-sample (SPS)	30	0.34
PAT sub-sample (SPS)	86	0.25

Recovery Status

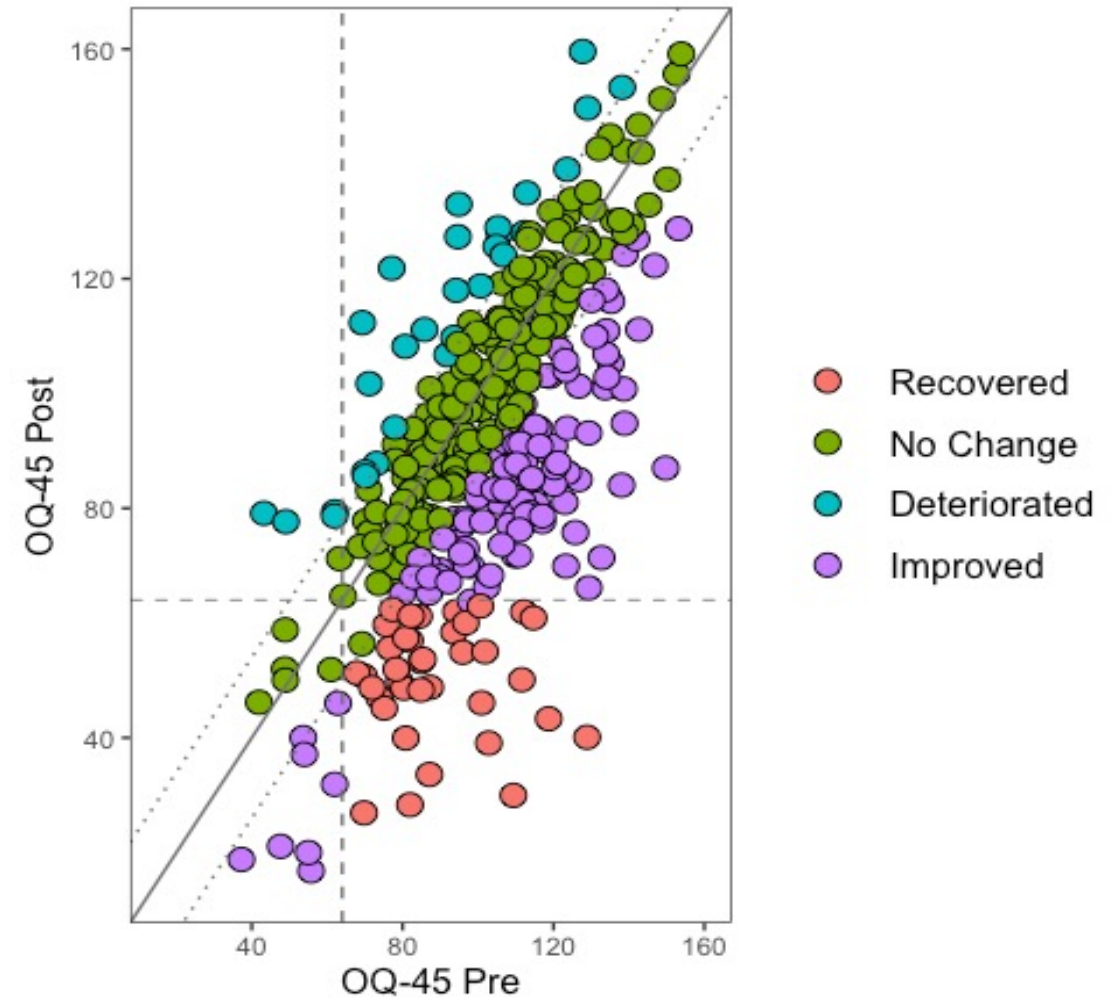

Table 2

Rates of reliable change, recovery and deterioration for the current study sample and for selected benchmarks (Hansen and Lambert 2002).

Study		Recovered	No Change	Deterioration	Improved	Total
Hansen (2002)	Total	681 (14.3%)	2709 (56.9%)	377 (7.9%)	994 (20.9%)	4761
	CMHC	31 (8.6%)	219 (60.6%)	37 (10.2%)	74 (20.5%)	361
SPS	Total	37 (10.16%)	189 (51.92%)	29 (7.97%)	109 (29.95%)	364
	CBT	22 (8.87%)	128 (51.61%)	23 (9.27%)	75 (30.24%)	248
	PDT	11 (12.79%)	46 (53.49%)	4 (4.65%)	25 (29.07%)	86
	CAT	4 (13.33%)	15 (50.00%)	2 (6.67%)	9 (30.00%)	30

Note. 18 patients fell within in the non-clinical range at baseline. No change = no reliable changes

Improved = Reliable Improvement Deterioration = reliable Deterioration

Dose Response

Table 3

Non-cumulative, differential rates of statistical and clinical change based on different dosage groups.

sessiongroup	n	d	ci	Recovered	No Change	Deteriorated	Improved
1-10	81	0.15	-0.04-0.35	4 (4.94%)	50 (61.73%)	9 (11.11%)	18 (22.22%)

Trajectories of Change

Trajectories of Change

- People get worse after approx. 150 sessions?
- The people left in treatment after 150 sessions have high distress and aren't getting better.

Trajectories of Change

Log-linear Trend

- Negatively accelerating changes.

Trajectories of Change

* p < 0.05

Summary of Findings

- High levels of baseline distress
- Therapy is effective but only a small effect.
 - Is it suppressed by non-responders?
- Recovery rates are low (but comparable to CMHC).
- No differences between treatments (effectiveness).
- Change is non-linear (mainly cubic).
- Very short treatments (1-10 sessions) show very little change.

Implications

- Support for service remit
 - Work with high distress
 - Short treatments less effective
- Some patients stay in treatment for a very long time but show limited change.
- Regularly monitoring outcomes could inform treatment decisions.
- Limited support for one treatment over another.

Limitations & Future Opportunities

- No control group -> RCT
- Not systematic -> Session-by-session monitoring.
- Self report only -> Other measures (self, clinician, utilisation).
- US norms -> UK OQ-45 validation study.
- No fidelity checks -> use them.
- Durability unknown -> Follow-up data
- Solely quantitative -> qual!
- Unknown concurrent treatments -> enquire & record
- More UK tertiary care studies!
